

COMMERCIAL PROPOSAL

A POS platform built for a fraction of the cost.

A commercial pricing model for DIKASIR — SaaS subscriptions and traditional licensing — set against what the build actually cost versus a full engineering team.

~Rp 15 jt

build cost (loaded)

~Rp 705 jt

cost of a 6-person team (3 mo)

~98%

cost avoided

2 wks vs 3 mo

time to working MVP

What it cost to build

The same working platform — Flutter POS app, NestJS + PostgreSQL backend, Vue admin portal, AWS deployment — measured against a conventional team: 1 senior dev, 3 coders, 1 DBA, 1 DevOps.

Development cost — team vs this build

Loaded cost for the equivalent output. Bars to scale.

shipped

Out-of-pocket tool cost was a Claude Max subscription at \$100/month; the build spanned ~2 weeks inside a single month. "Loaded" adds ~40–60 hrs of your directing time valued at a senior rate. Team figure uses Jakarta 2026 salaries × 1.4 for benefits, tools, PM and overhead.

Priced with the market, broader in capability

Indonesian SMB POS subscriptions cluster at ~Rp 100–350k per outlet per month. DIKASIR sits on that line, then out-features it: F&B and grocery in one app, delivery-order intake, open bills, corrections with approval, attendance, reporting, and a web admin portal.

SaaS subscription

Per outlet, per month. Annual billing = ~2 months free (~17% off). Free tier is the funnel; Pro is the anchor.

Gratis Rp 0 Solo / warung ✓ 1 outlet, 1 device ✓ Cash + QRIS ✓ Up to 50 products ✓ Daily sales total	Starter Rp 149rb /outlet / month Single shop ✓ Unlimited products & sales ✓ Inventory ledger ✓ Thermal receipts ✓ 2 devices · email support	MOST POPULAR Pro Rp 299rb /outlet / month F&B / growing ✓ Everything in Starter ✓ Open bills + delivery orders ✓ Void/refund + approval ✓ Attendance + reporting ✓ Web admin portal · 5 devices
Business Rp 549rb /outlet / month Multi-outlet ✓ Consolidated dashboard ✓ Advanced roles ✓ API access ✓ Unlimited devices · phone support	Enterprise Custom Chains / government ✓ SLA + dedicated CSM ✓ Real provider webhooks ✓ On-prem option ✓ White-label	

Add-ons

Extra device Rp 49rb / month	Hardware bundle Printer + scanner + drawer — one-time Rp 2.5–5 jt, or rent-to-own Rp 150–250rb/mo
--	--

QRIS payments

Pass regulated MDR + optional **0.2–0.4%** platform fee

e-Receipt / WhatsApp, loyalty, QR menu

Rp 50–150rb / month each

Onboarding + training

One-time **Rp 500rb–2 jt**

Extra outlet

At tier price; volume discount 10–25% at 5+ / 20+

MODEL B

Traditional / perpetual licensing

For buyers who reject recurring cost or need on-premise data control — chains, franchises, government, large F&B groups.

ITEM	PRICE	NOTES
Perpetual license	Rp 8–15 jt / outlet	One-time; tiered Standard vs Pro feature set. Or Rp 3–5 jt / terminal.
Annual maintenance (AMC)	18–20% of license / yr	Updates + support (~Rp 1.5–3 jt / outlet). Recurring.
Implementation / setup	Rp 5–25 jt	Install, data migration, training, hardware config.
On-premise / self-hosted	+Rp 15–50 jt	Their own server/AWS; for data-control buyers. Plus AMC.
White-label / source license	Rp 250 jt–1 M+	Resellers or a single large enterprise; one-time or revenue-share.

Payback: a ~Rp 10 jt perpetual license vs Pro SaaS at Rp 3.6 jt/yr $\approx$ 2.8-year break-even — licensing wins only for long-horizon or OpEx-averse buyers.

RECOMMENDATION

Lead with SaaS, sell licensing to enterprise

Why SaaS first

- ✓ What Indonesian SMBs already expect (Moka/Majoo set the frame).
- ✓ Recurring revenue; low churn; predictable growth.
- ✓ Cost-to-serve is tiny — the stack runs on modest EC2 + RDS → ~85–90%+ gross margin.

Where licensing wins

- ✓ Enterprise, chains, government demanding ownership or data residency.
- ✓ Closes deals SaaS can't — at a premium.
- ✓ Bridge: annual prepay + hardware bundle behaves like a light license.

Go-to-market anchor

Free → Pro is the funnel. Price Pro on the Moka line and out-feature it; convert with annual prepay + free onboarding.

Estimates, not accounting. Competitor prices are published 2026 rates and may change; Indonesian salary and cost figures are mid-market Jakarta ranges ($\pm 30\%$). USD $\approx$ Rp 15,800. "jt" = juta (million), "M" = miliar (billion), "rb" = ribu (thousand). Team-effort was estimated by feature scope, not line count. A production launch still warrants dedicated QA, load, and security testing.
